Modeling and Evaluation

Business Insight and Recommendation

O1 LATAR BELAKANG

LATAR BELAKANG

Nudle sebagai perusahaan pihak ketiga dipercayai oleh beberapa perusahaan makanan untuk mendistribusikan kupon kepada pengemudi /pelanggan melalui aplikasi NMaps.

Berdasarkan kasus yang diberikan, NMaps hanya dapat mendistribuskan kupon kepada pelanggan dengan

COUPON ACCEPTANCE 56.84%

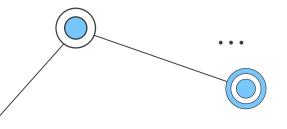

COUPON ACCEPTANCE

Jumlah penerima kupon dari total keseluruhan pelanggan yang diberikan kupon. Dalam kasus ini, penerima kupon pasti menggunakan kupon.

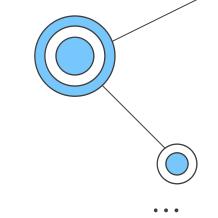

COUPON = Pelanggan yang menerima kupon

ACCEPTANCE Total pelanggan
yang diberikan kupon

Pemberian kupon merupakan salah satu cara untuk meningkatkan revenue dan mendapatkan pelanggan baru dalam sebuah bisnis. Berdasarkan pemberian kupon, 69% mereka akan merasa menjadi pelanggan yang pintar, 60% pelanggan akan mencoba produk baru, 54% melakukan pembelian impulsif.

LATAR BELAKANG

PROBLEM STATEMENT

Rendahnya penerima kupon yakni 56.84%

GOAL

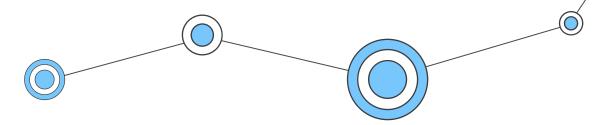

Meningkatkan jumlah penerima kupon terhadap pelanggan

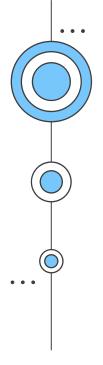

OBJECTIVE

Membuat model machine learning untuk memprediksi kelas penerima kupon serta menghasilkan insight berupa business recommendation untuk meningkatkan penerima kupon

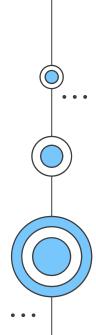

BUSINESS METRIC

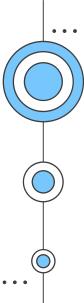

Coupon Acceptance Rate Peningkatan Benefit-Cost Ratio

O2 DATASET

destination passanger weather temperature time coupon expiration gender age maritalStatus has_children education occupation income car Bar CoffeeHouse CarryAway RestaurantLessThan20 Restaurant20To50 toCoupon_GEQ5min toCoupon_GEQ15min toCoupon_GEQ25min direction_same direction_opp

DATASET

TENTANG DATASET

Dataset ini berisi fitur yang menunjukkan karakteristik pelanggan yang diberikan kupon

SHAPE

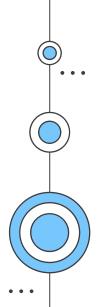

12.684 baris data, 26 kolom (25 fitur dan 1 target 'Y')

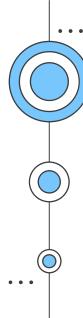

MISSING VALUE

12.576 baris data di fitur 'car', 107 baris data di fitur 'Bar', 217 baris data di fitur 'CoffeeHouse', 151 baris data di fitur 'CarryAway', 130 baris data di fitur 'RestaurantLessThan20', 189 baris data di fitur 'Restaurant20To50'

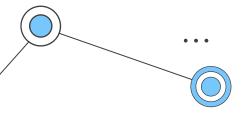

DUPLICATED DATA

74 baris data

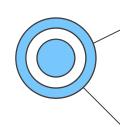

EXPLORATORY DATA ANALYSIS (EDA)

EXPLORATORY DATA ANALYSIS

DTYPE

8 Numeric, 18 Object

26 Object

Semua valuenya merupakan kategorikal

CONSTANT VALUE

toCoupoun_GEQ5min

CORRELATION

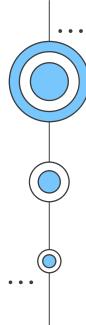

4 features highly correlated

- 'direction_same' and 'direction_opp'
- 'time' and 'destination'

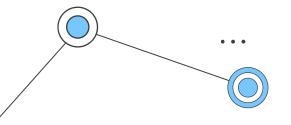

TOO MANY UNIQUE VALUE

'occupation'

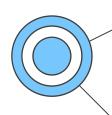

04 DATA **PREPROCESSING**

DATA PREPROCESSING

HANDLE MISSING VALUE

Fill with Mode (5 features)
Drop (1 feature)

· 'car'

FEATURE TRANSFORMATION

• 'age'
Transform it from 8 unique values
to 5 unique values

SPLIT DATA

70:30

FEATURE ENCODING

Label Encoding + 3 methods:

- One Hot Encoding
- Hash Encoding
- Binary Encoding

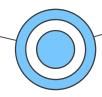

FEATURE EXTRACTION

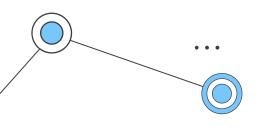

- 'passanger_destination'From 'passanger' and 'destination'
- 'marital_hasChildren'

From 'maritalStatus' and 'has_children'

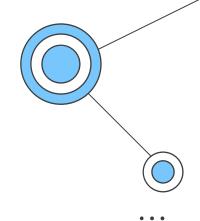

'temperature_weather'

From 'temperature' and 'weather'

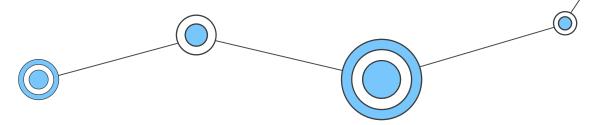

DATA PREPROCESSING

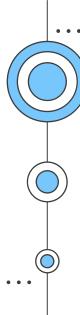

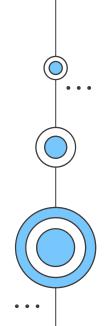

DATASET TREATMENT

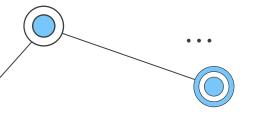

Terdapat 7 jenis dataset dengan perlakuan preprocessing yang berbeda - beda

DATASET	FEATURE ENGINEERING	EN	ICODING ME	ETHOD	HANDLE	Feature Selection	USER	
	Extraction	One Hot	Hash	Binary	CLASS IMBALANCE	Manual		
1		√				√	Vias	
2	✓	√				✓	Norisa	
3			✓			√	Risa	
4	✓		√			√	Zul	
5	✓		√		√	√	Dika	
6				√		√	Yovan	
7	✓			√		√	Humaidi	

MODEL

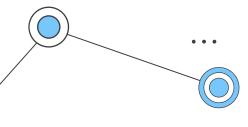

- Logistic Regression
- Decision Tree
- Random Forest
- XGBoost
- CatBoost

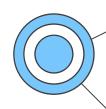

EVALUATION METRICS

Accuracy

Karena dataset kami memiliki fitur target dengan kelas yang balanced. Hasil prediksi model menghitung secara keseluruhan yang menerima kupon dan tidak menerima kupon.

	BEFORE TUNING HYPERPARAMETER							
DATASET	MODEL	EVALUATION METRICS						
DATASET	MODEL	Accuracy	Precision	Recall	ROC-AUC Train	ROC-AUC Test		
	LogisticRegression							
	DecisionTree	0.6	0.66	0.61	0.99	0.6		
1	RandomForest	0.64	0.68	0.71	0.99	0.67		
	XGBoost	0.61	0.63	0.79	0.66	0.64		
	CatBoost							
	LogisticRegression	0.67	0.69	0.77	0.73	0.73

	XGBoost	0.64	0.62	0.92	0.75	0.74		
	CatBoost	0.75	0.75	0.82	0.82	0.93		

Berdasarkan modeling sebelum tuning hyperparameters dataset 4 dengan model Random Forest menghasilkan performa model terbaik. Keakurasian dimiliki sebesar 76%

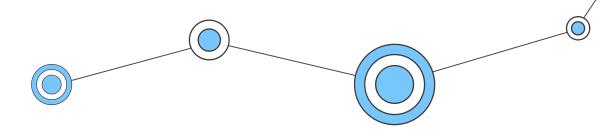

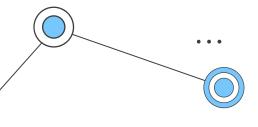

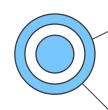

TUNING HYPERPARAMETERS

- Dilakukan terhadap seluruh dataset dan model
- Metode yang digunakan ialah RandomizedSearchSV dan GridSearchSV

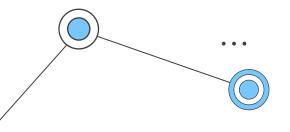

AFTER TUNING HYPERPARAMETER								
DATASET	MODEL	EVALUATION METRICS						
DATASET	MODEL	Accuracy	Precision	Recall	ROC-AUC Train	ROC-AUC Test		
	LogisticRegression							
	DecisionTree	0,63	0,64	0,82	0,68	0,65		
1	RandomForest	0,62	0,62	0,87	0,68	0,66		
	XGBoost	0,62	0,61	0,89	0,7	0,66		
	CatBoost

	LogisticRegression	0.68	0.69	0.79	0.72	0.72		
	DecisionTree	0.68	0.70	0.77	0.73	0.73		
4	RandomForest	0.74	0.73	0.86	0.81	0.94		
	XGBoost	0.73	0.73	0.85	0.80	0.87		
	CatBoost	0.76	0.77	0.83	0.83	0.97		

	AFTER TUNING HYPERPARAMETER							
DATASET	MODEL	EVALUATION METRICS						
DATASET	MODEL	Accuracy	Precision	Recall	ROC-AUC Train	ROC-AUC Test		
	LogisticRegression	0.67	0.71	0.70	0.75	0.72 • •		
	DecisionTree	0.44	0	0	0.5	0.5		
5	RandomForest	0.74	0.76	0.79	1.00	0.81		
	XGBoost	0.74	0.76	0.80	1.00	0.82		
	CatBoost	0.73	0.75	0.78	0.90	0.81		
	LogisticRegression	0.68	0.67	0.69	0.72	0.70		
	DecisionTree	0.71	0.72	0.70	0.80	0.75		
6	RandomForest	0.70	0.75	0.76	0.85	0.76		
	XGBoost	0.68	0.77	0.76	0.82	0.72		
	CatBoost	0.62	0.63	0.67	0.80	0.74		
	LogisticRegression	0.66	0.67	0.76	0.72	0.72		
	DecisionTree	0.66	0.70	0.71	0.99	0.66		
7	RandomForest	0.73	0.73	0.83	0.95	0.80		
	XGBoost	0.56	0.56	0.99	0.72	0.72		
	CatBoost	0.74	0.75	0.82	0.89	0.81		

Berdasarkan modeling setelah tuning hyperparameters dataset 4 dengan model CatBoostmenghasilkan performa model terbaik. Keakurasian dimiliki sebesar 76%

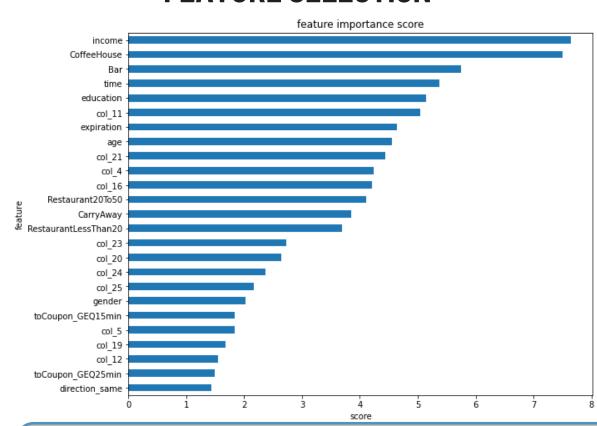

FEATURE SELECTION

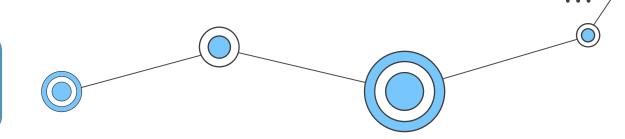

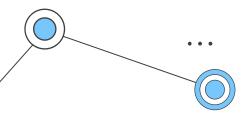

Melakukan feature selection/drop 2 fitur terbawah berdasarkan hasil feature importance score. Dengan melakukan ini dapat terlihat keakurasian model meningkat menjadi 77%.

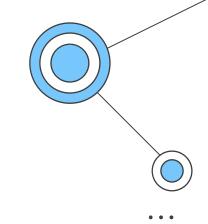

AFTER TUNING HYPERPARAMETER – BEFORE FEATURE IMPORTANCES								
DATASET	MODEL	EVALUATION METRICS						
		Accuracy	Precision	Recall	ROC-AUC Train	ROC-AUC Test		
4	CatBoost	0.76	0.77	0.83	0.83	0.97		

AFTER TUNING HYPERPARAMETER – AFTER FEATURE IMPORTANCES								
DATASET	MODEL	EVALUATION METRICS						
		Accuracy	Precision	Recall	ROC-AUC Train	ROC-AUC Test		
4	CatBoost	0.77	0.77	0.84	0.83	0.97		

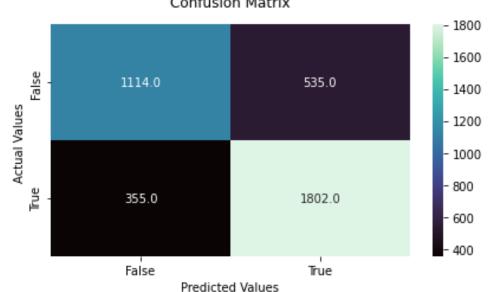

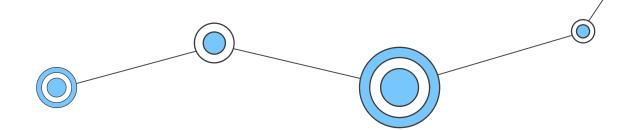

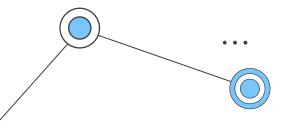

CONFUSION MATRIX

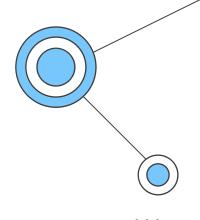

ACCURACY = 77%
PRECISION = 77%
ROC - AUC = 97%

SHAP FORCE PLOT

Fig a. Pelanggan Tidak Menerima Kupon (< 0.3559)

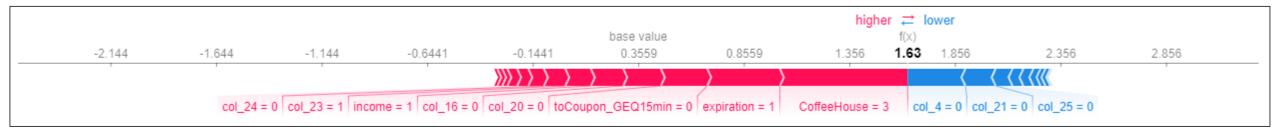

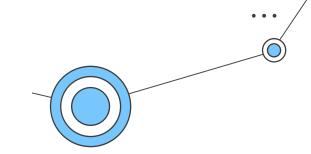

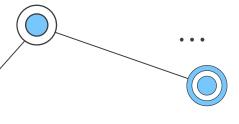

Fig b. pelanggan menerima kupon (> 0.3559)

Berdasarkan interpretasi shap force plot, dapat dilihat jika 'expiration' merupakan salah satu fitur yang Memiliki impact besar terhadap output model dalam memprediksi penerima kupon

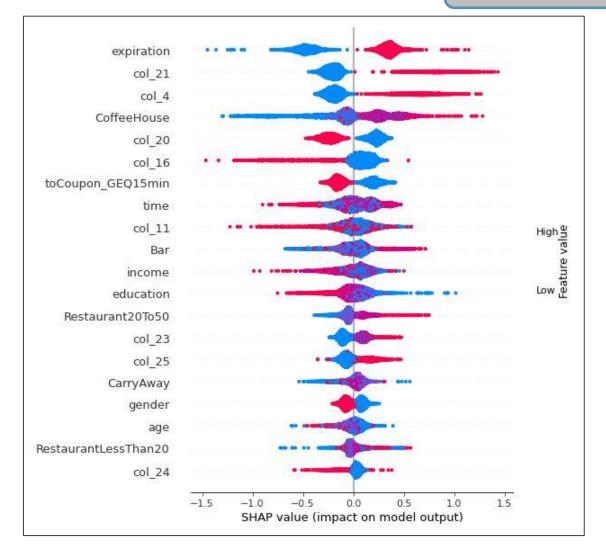

Besarnya impact fitur ini mendeterminasikan output model apakah pelanggan Menerima/tidak menerima kupon (fig a. dan fig b.)

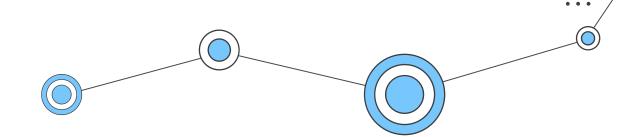

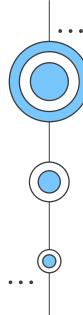

SHAP VALUE

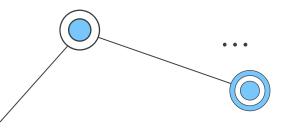

Salah satu fitur yang memiliki impact/influence terbesar terhadap output model yakni fitur 'expiration'.

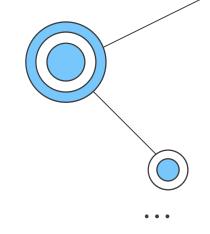

'expiration' akan menjadi prioritas utama menjadi fitur yang akan ditelaah lebih jauh untuk business insight and business recommendation.

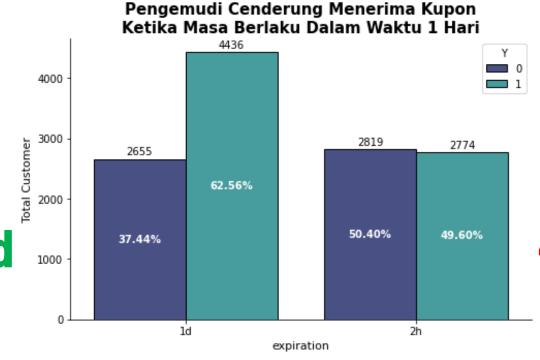

06 BUSINESS INSIGHT AND RECOMMENDATION

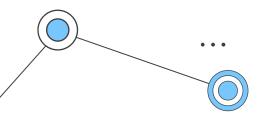

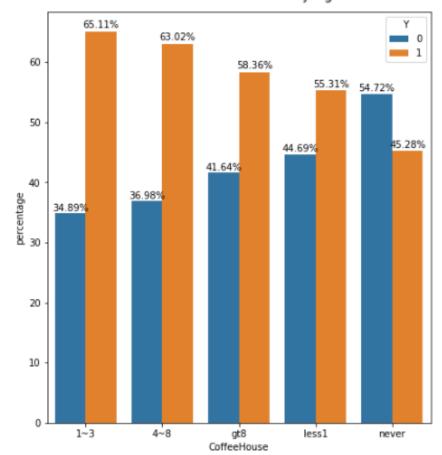

expiration
2 HOUR
49.6% Accepted

Kupon yang memiliki masa berlaku lebih lama lebih lebih banyak diterima oleh pelanggan

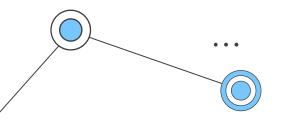

Distribusi Pemakaian Jenis Kupon Coffee House Berdasarkan Frekuensi Kunjungan

Pelanggan yang pergi ke 'CoffeeHouse'
1-3 kali dalam sebulan memiliki
presentase meerima kupon paling
tinggi

- Pelanggan yang memiliki
 histori berkunjung ke
 'CoffeeHouse' dapat
 diprioritaskan untuk diberikan
 jenis kupon CoffeeHouse
- Pelanggan yang tidak memiliki histori berkunjung/'never' ke 'CoffeeHouse' dapat diberikan kupon lainnya

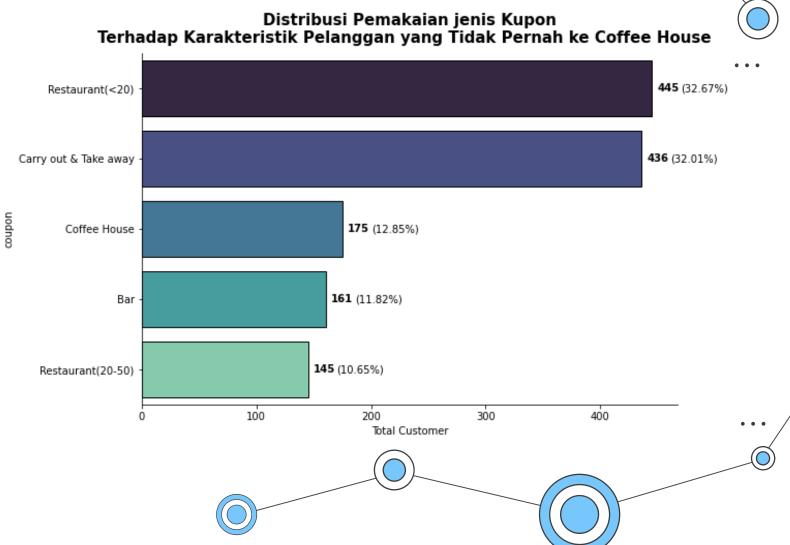

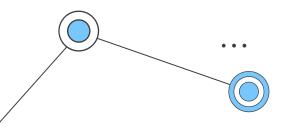

Jenis kupon tertinggi untuk pelanggan yang tidak pernah ke Coffee house adalah kupon **Restaurant Less Than** \$20 dan **Carry Away**

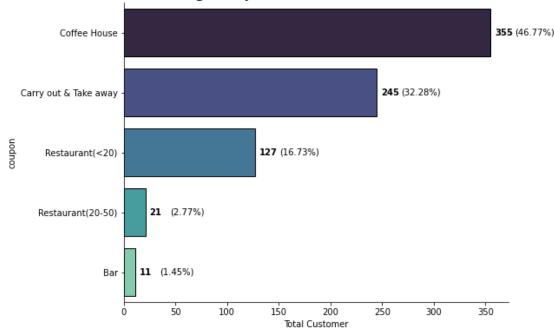

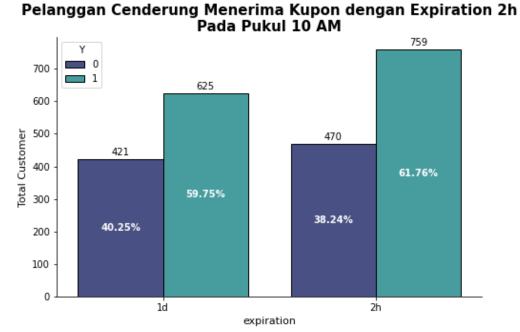

Redeemed rate pada pukul 10AM lebih besar dengan masa kadaluarsa 2 jam dibandingkan dengan 1 hari

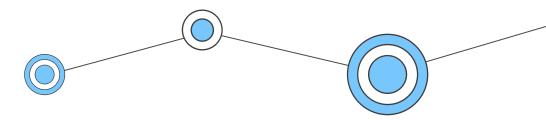

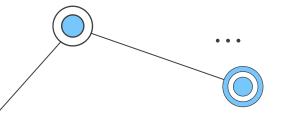

Distribusi Pemakaian jenis Kupon Dengan Expiration 2h Pada Pukul 10AM

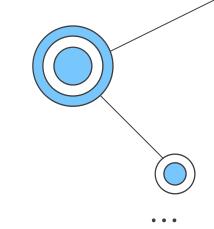

Jenis kupon tertinggi untuk pelanggan dengan expiration 2h adalah kupon Carry Away dan Coffee house

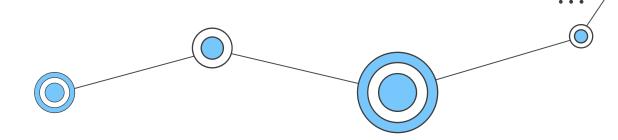

BUSINESS RECOMMENDATION

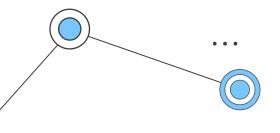

ACTIONABLE INSIGHTS

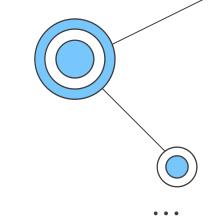

- 1. Pelanggan yang memiliki histori berkunjung ke Coffee House dapat diprioritaskan untuk diberikan kupon jenis Coffee House
- 2. Pelanggan yang tidak memiliki histori berkunjung/'never' ke Coffee House dapat direkomendasikan kupon jenis Carry Away dan Restaurant Less Than \$20
- Kupon dengan expiration 2h dapat diprioritaskan untuk diberikan pada jam 10 pagi dengan jenis kupon berupa Coffee House dan Carry Away. Karena hal ini dapat memicu perilaku impulsif terhadap pelanggan

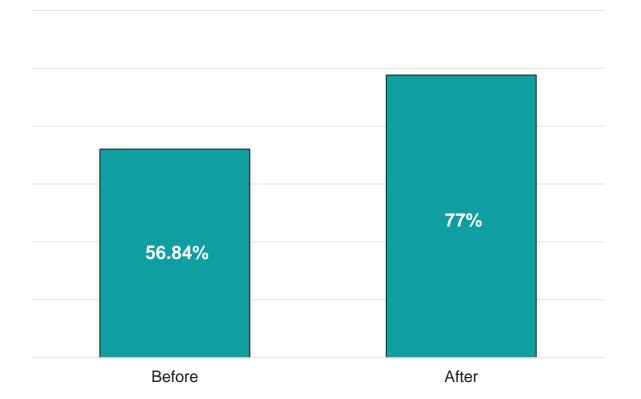

BUSINESS RECOMMENDATION

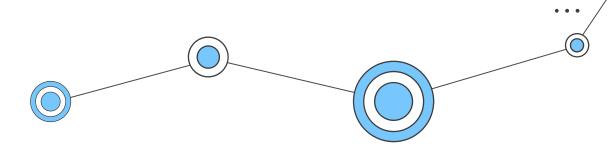

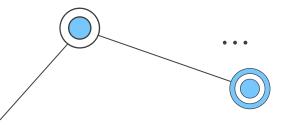

MODEL 'DEEP LEARNING 4.0'

Perbandingan Penerima Kupon Sebelum dan Sesudah Menggunakan Model 'Deep Learning 4.0'

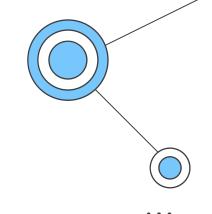

Terdapat Improvement penerima
Kupon sebanyak 20.16% dengan
jumlah sebelum penggunaan Model
sebanyak 56.84% menjadi 77%
berdasarkan nilai presisi dari model

BUSINESS RECOMMENDATION

PERHITUNGAN B/C RATIO

B/C Ratio = Benefit x Jumlah Coupon Acceptance

Cost x Jumlah Coupon Acceptance

BEFORE USING OUR MODEL:

COUPON ACCEPTANCE 56.84%

Dengan asumsi Benefit percoupon = \$3 dan Cost Percoupon = \$1, dan penerima kupon sebanyak 7210 orang dari 12.684 orang B/C Ratio = $(\$3 \times 7210)$ / $(\$1 \times 12.684)$ = 21.630/12.684

1.70x

AFTER USING OUR MODEL:

COUPON ACCEPTANCE 77%

Dengan asumsi Benefit percoupon = \$3, Cost Percoupon = \$1, Asumsi hasil prediksi dataset baru dengan penerima kupon sebanyak 500 orang dan nilai presisi model 77% B/C Ratio = $(\$3 \times (500 \times 77\%))/(\$1 \times 500) = 1.155/500$

2.31x

TERIMA KASIH
